HONEY PROCESSING EQUIPMENT

58 Barnum Road Devens, MA 01434

Model 1700 Chain Uncapper

The 1700 Chain Uncapper has been sent with the handle detached. Insert the handle in the hub on the side of the machine and line up the set screw with the milled flat section of the handle, tighten to secure.

Frame guides have been left straight for the beekeepers who use the straight sided frames. For beekeepers using tapered side bar frames use a pair of pliers to bend the corners of the frame guides to fit your specific frames.

A T-Handle tool has been sent with your Chain Uncapper, this can be used to loosen the hex nuts on the pillow block bearings that secure the chain reels. Adjusting the position of the chain reels will help you control how deep or shallow the chains uncap your frames.

The micro switch that controls the on-off of the Chain Uncapper when the handle is lowered or raised is adjustable on the underside of the machine.

Maintenance and Cleaning: Once in a while apply food grease to the lifters on the sides of the frame guides and the grease fitting located on one of the side pulleys, and add food grade oil in the pillow block bearing cups on the sides of the chain reels. Use hot water and a wash cloth to clean after usage.
