MAXANT MODEL 400-1 HONEY PUMP

- Maxant Model 400-1 Honey Pump uses a Stainless Steel pump housing with Stainless Steel Gears.
- Belt driven and powered by a 1/3 horsepower motor, it moves honey at a smooth and steady rate, that does not agitate or aerate the honey.
- Able to pump a warm 5 gallon bucket within a few minutes, and room temperature honey at a slower pace.
- Ideal for pumping 5 gallon pails, 55 gallon drums, or from a clarifier to a holding tank.
- Comes equipped with 1-inch NPT threads and 1.5-inch sanitary fittings.
- We recommend buying hose from usplastic.com. Part Numbers: #54251 or #54252 depending on the size of the hose barb fittings you purchase.
- If the pump needs to be primed. Remove the 1-inch plug from the T-fitting on the inlet. Pour in about a half a pound of honey into the T-fitting, and replace the 1-inch plug threading it in tightly. Turn pump on with inlet hose inside honey.
